EXPERIMENT 11

Application Deployment and Migration

AIM

To inspect and configure the multi-stage deployment environment for the Healthify Patient Appointment Management System in Zoho Creator.

APPLICATION CONTEXT

Application environments help separate development changes from staged testing and production use. The submitted screenshot shows Healthify in the Environments console, with Stage and Production columns displaying version 1.0.

PROCEDURE

Step 1: Open the Zoho Creator administration console.

Step 2: Select Environments from the Deploy section.

Step 3: Locate the Healthify application in the environment workspace.

Step 4: Review the Stage and Production columns and note the version shown for each environment.

Step 5: Use the available Manage or Publish options to inspect the supported deployment actions. Do not publish changes to production unless they have been checked.

Step 6: Record the visible environment status and capture the deployment screen.

SCREENSHOTS / EVIDENCE

The following screenshots are from the submitted Zoho Creator work and are included as practical evidence.

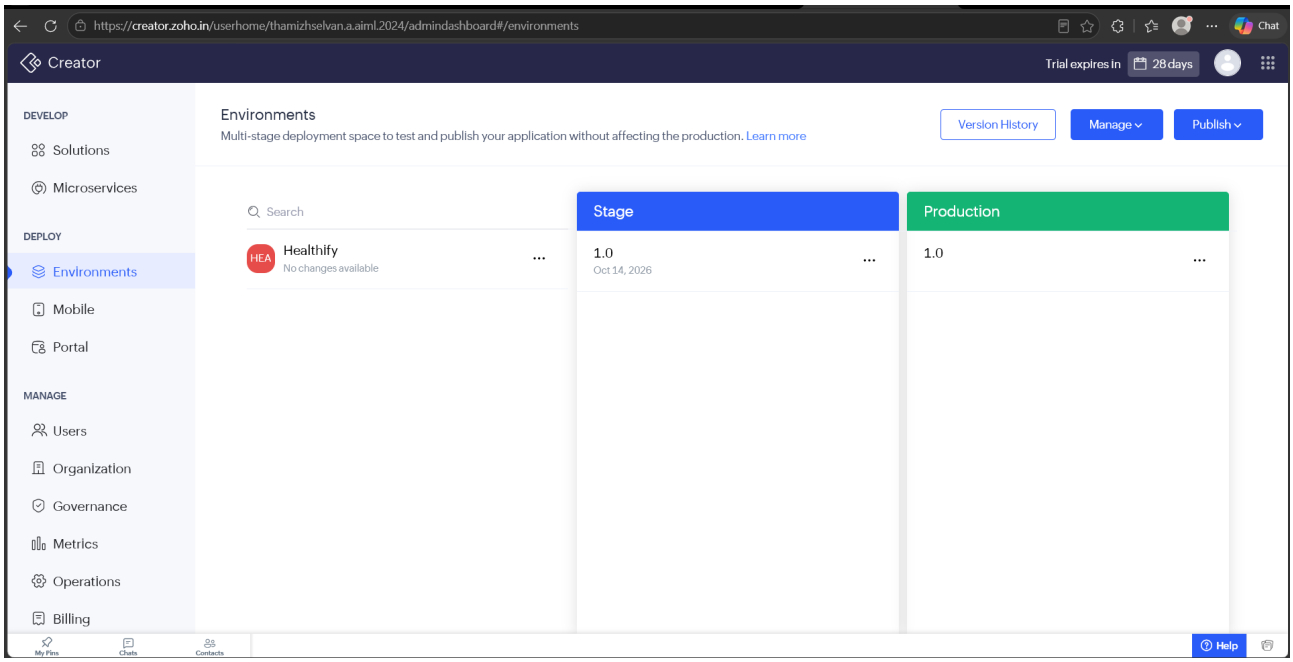

Figure 11.1: Healthify application displayed in the Environments console with Stage and Production version 1.0.

RESULT

Thus, the deployment environment for Healthify was inspected. The evidence confirms that the application appears in the Environments console and that Stage and Production version information is visible.
