Patient Appointment Command Center – Page Builder

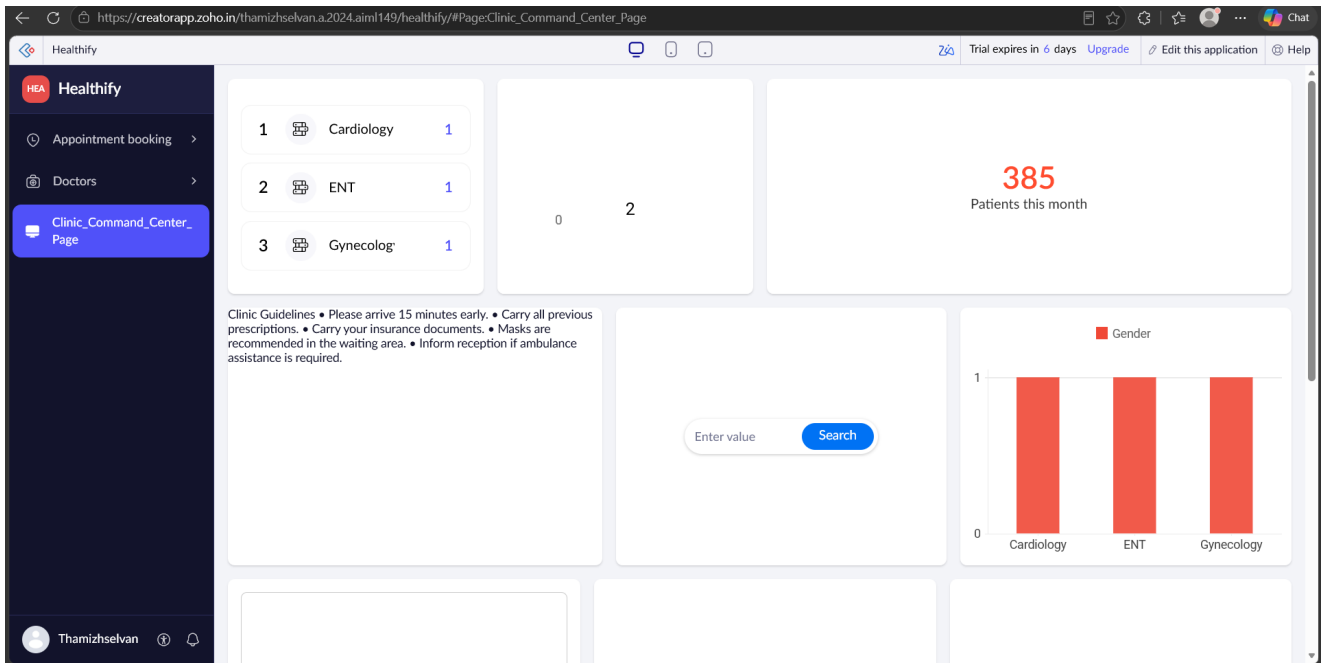

Aim

To design and build a single internal **Clinic Command Center Page** in Zoho Creator for the existing Patient Appointment & Scheduling Management application, using Page Builder elements to provide a unified workspace for monitoring, searching, managing, and reviewing patient appointment data.

Procedure

1. Open the **Patient Appointment & Scheduling Management** application in Zoho Creator.
2. Create and open the **Clinic_Command_Center_Page** using the Page Builder.
3. Add the required page elements such as Panel, Gauge, Chart, Search, Board, Button, Form, Report, Snippets, Widgets, and Viewer.
4. Configure the Gauge to display patient appointment/footfall information.
5. Configure the Chart to display appointment counts by department.
6. Add the Search element to allow staff to search for patient appointment details.
7. Configure the Board as a Kanban-style appointment status tracker.
8. Add the appointment reminder Button for quick actions.
9. Embed the Appointment Booking Form for quick walk-in registration.
10. Embed the full appointment Report for detailed record viewing.
11. Add Clinic Guidelines using the Snippets element and provide a Medical Report Viewer for uploaded reports.
12. Add supporting Widgets for doctor availability and queue status, then verify the completed command center page using sample appointment data.

Clinic Command Center Page – Zoho Creator

Result

The **Clinic Command Center Page** was successfully created in Zoho Creator. The page provides a unified workspace for viewing appointment information, department statistics, patient search, clinic guidelines, and other appointment-management functions through a centralized Page Builder interface.
